

# Pipe Racks & Hose Kits

## Adsorption Vessel Connectors

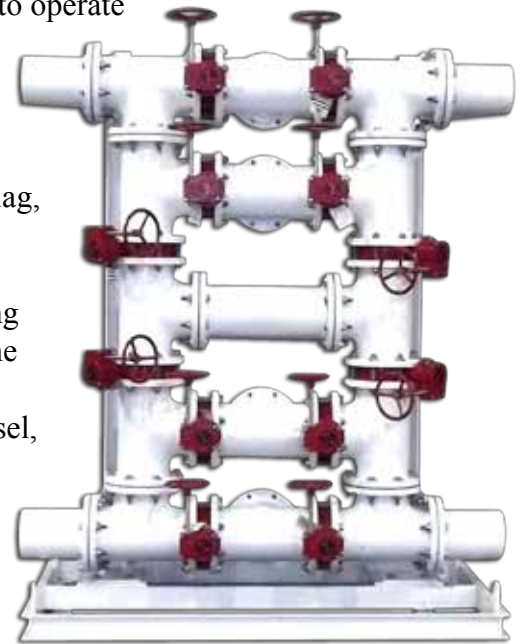

*For Liquid & Vapor Phase Integrated Adsorption Systems*

**T**IGG offers a full range of pipe racks to operate CANSORB® integrated liquid phase systems.

TIGG's pipe rack systems allow two adsorption vessels to operate in series, lead lag, or single vessel.

The 12-valve pipe rack permits back-washing one vessel while the other is on stream. Some pipe rack modules include pressure relief valves, pressure gauges to monitor each vessel, and sample valves. In other cases, the vessels themselves include this equipment.

TIGG can also design a custom pipe rack for a three-vessel system. Automatic controls and other materials of construction are an option.

### HOSE KITS

TIGG's hose kits are ideal when the application is temporary or cost is a concern. Hose kits include adaptors to connect the CANSORB flange connections to quick connects and to the hose with quick connect ends. The single hose kit is for one CANSORB vessel, and the dual kit allows two CANSORB vessels to be used in series.
